

## Authorization to Release of COOLFluid (version 2) Under LGPL v3 License

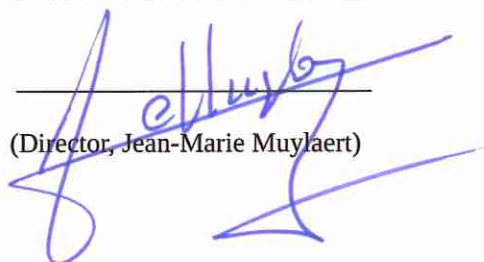

To Whom It May Concern,

In the quality of the Director of the Von Karman Institute for Fluid Dynamics (VKI), I authorize the release of all existing and future developed COOLFluid source code, also including plug-in modules not yet released as open source, under the same license already applied to the kernel code since the 18th March 2011, with the following conditions and restrictions:

1. That the license will be the GNU Lesser General Public License version 3 (LGPL v3) as described in <https://www.gnu.org/licenses/lgpl.html>, recognizing that the license allows VKI or any other entity to build closed software that uses the public sources of COOLFluid and from there gain revenue, as long as changes to the public sources of COOLFluid are made public and accessible to anybody having access to the common code repository.
2. That the publicly released source code does not include COOLFluid modules which were and/or will be developed under non-disclosing agreements with third parties (unless an explicit agreement is found between all involved parties and VKI prior to the release) and does not include the following modules: Mutation, Mutation2, Mutation2OLD.
3. That this release aims at stimulating and/or consolidating international collaboration, particularly within the aerospace community, by granting unrestricted access to a world-class computational platform for multi-disciplinary scientific simulations on modern High Performance Computing architectures.
4. That the development team at the VKI performs a series of tests to insure that the software released maintains a reasonably high quality with the aim of protecting the good reputation of the Von Karman Institute.

Signed and approved,

Rhose-St-Genève, 11 / 8 / 2014

  
(Director, Jean-Marie Muylaert)
